Subject: Comment for Franklin Center Watchdog Arena

I am a freelance journalist covering the western region of Colorado for the Franklin Center newspaper. I would like to get the comment from an official at the Region 8 EPA office regarding the accident affecting the Animas River.

My questions are:

Is the EPA working with officials in southwestern Colorado to create a fund or some mechanism to help those individuals, businesses, landowners, ranchers, etc. who are, and will in the future, have to deal with both short-term and long-term consequences of the mine water spill?

What kind of long-term monitoring of the water, tributaries, soil, vegetation, wildlife, etc. will EPA conduct to track the possible short and long-term effects of the mine water

spill?

I understand that your agents are very busy, but I would greatly appreciate timely responses to these 2 questions. If you're unable to give details at this time, please indicate any conversations or ideas that have been discussed about aiding those interests who may be harmed and what kind of mitigation may be ongoing. Please call (970) 985-1936 and as for Marjorie.

Thank you,
